The Genesys 6LoWPAN Gateway/Router Pro provides multiple transparent RS-485/422 tunnels over a wireless IEEE 802.15.4 standard, with 6LoWPAN connectivity.

When installed, the Gateway/Router Pro allows for transparent communication between RS-485/422 buses over a wireless network, eliminating the need for long cabling.

For example, control networks such as Modbus can be elegantly installed with Internet connectivity via Modbus TCP.

Multiple 6LoWPAN Gateway/Routers form a wireless network mesh. Each node has its own intelligence, using an IPv6 stack, allowing for point-to-point communication between any two devices on the network.

Via a connection to an external router, the 6LoWPAN Gateway/Router Pro can output communications data to any mobile device or PC connected to the internet. Genesys can provide custom apps to suit the application.
